

Grease cleaner to effectively remove the grease stuck to the electrical equipment in GIS substation

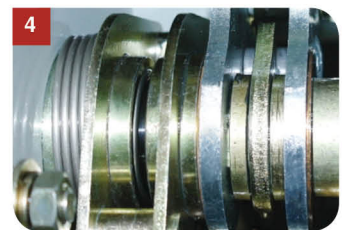

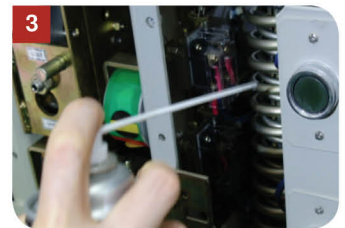

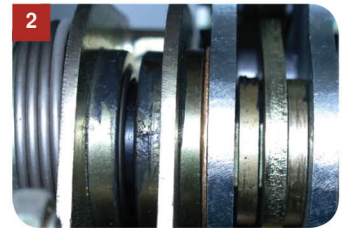

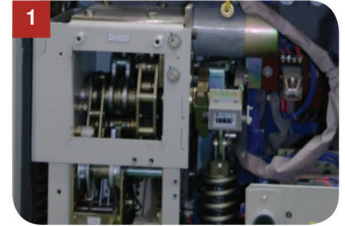

The maintenance manual of Korea Electric Power Corporation (KEPCO)

specifies to use SGD-77 to remove grease in the substation facilities.

East-West Power Plant in Korea (Electrical Panel)

SGD-77 Features

The grease on circuit-breaker is hard in nature to remove, and it prevents the circuit-breaker from normal operation causing a failure or accident.

Excellent decomposability | for Mineral oil, Synthetic oil

Economy | Superior cleaning power without requiring to disassemble the equipment

Efficiency | Appropriate jet force enabling the cleaning agent to penetrate into the gaps to easily remove grease

Safety | No damage (corrosion) to the parts after cleaning work

Eco-friendly | Safe to the human body and environment

Grease stuck to electrical devices obstructs normal operation of the circuit-breaker and causes electrical accidents

Accidents
